

HealthAssess™

In a single health assessment teaching solution, HealthAssess offers a combination of learning modules and authentic practice simulations to fully prepare nursing students to perform health assessments on all major body systems using the most current techniques and practices.

12 LEARNING MODULES

Learning modules promote student mastery by focusing on the most relevant knowledge, techniques and clinical scenarios for nurses today.

- | | | |
|--------------------------------------|---------------------------------|-------------------------------------|
| 1. Introduction to health assessment | 5. Head, neck, and neurological | 9. Musculoskeletal and neurological |
| 2. General survey | 6. Respiratory | 10. Head-to-toe |
| 3. Health history | 7. Cardiovascular | 11. Breast and lymphatics |
| 4. Skin | 8. Abdomen | 12. Rectum and genitourinary |

ACTIVE LEARNING. Modules incorporate engaging activities that promote deep learning with multi-media tutorials, interactive games, drill questions and virtual demonstrations.

5 VIRTUAL SIMULATION MODULES

Virtual simulation modules build confidence and clinical judgment skills as they immerse students in authentic healthcare settings and situations as nurses conducting health assessments and selecting interventions for realistic, diverse virtual clients.

1. Virtual Practice: Shirley Williamson (*Bronchitis*)
2. Virtual Practice: David Rodriguez (*Sports Injury*)
3. Virtual Practice: Harold Stevens (*Cardiac*)
4. Virtual Practice: Diane Radford (*Abdominal*)
5. Virtual Challenge: Timothy Lee (*Head-to-Toe*)

DEEP LEARNING. Virtual Practice simulations create a safe, non-intimidating learning environment that facilitates deep learning through exploration with real-time guidance from a virtual coach and repeated practice interacting with virtual clients who features a level of realism most conducive to student learning.

AUTHENTIC PRACTICE. Simulations incorporate authentic nurse-client dialogue and virtual clients that feature realistic physical attributes, anatomy, body language, facial expressions and voice tone and inflection. Students interact with diverse client populations to identify both expected and unexpected healthcare findings then select interventions.

EHR DOCUMENTATION. All virtual simulations integrate practice with EHR documentation that can be submitted for educator grading.

INTEGRATING HEALTHASSESS

Getting started with HealthAssess is easy.

ATI will be offering great resources to help you integrate HealthAssess in your curriculum this fall.

ATI QUICK-DIVE WEBINAR(S)

Watch a live demo and integration tips in two recorded webinars in ATI Academy (via your ATI Faculty Portal), these webinars will demo HealthAssess and offer integration insights and tips. Register and learn more at atiquickdive.eventbrite.com.

STUDENT VIEW

Upon launch, student view will allow you to enter your ATI Faculty Portal and peek at a student view of HealthAssess. Explore the product card and corresponding modules from the perspective of a student.

INTEGRATION TOOLS

EDUCATOR IMPLEMENTATION GUIDE (EIG)
These can be found under Resources in your ATI Faculty Portal.

LESSON PLANS

These can be found under Resources in your ATI Faculty Portal.

STUDENT & FACULTY USER GUIDES

User guides provide instruction on how to use HealthAssess.
